Inpatient Subcutaneous Insulin Sliding Scale

Reference	PHA-INS-02 v3
Owner	Diabetes Inpatient Team
Approved by	Quality and Patient Safety Committee
Effective date	23/03/2026
Next review	23/03/2029
Applies to	All clinical areas of the Centre Hospitalier Saint-Aubin

1. Scale (insulin aspart, subcutaneous)

Capillary glucose (mmol/L)	Units of insulin aspart	Note
below 4.0	0	hypoglycaemia protocol
4.0 to 7.9	0	
8.0 to 11.9	2	
12.0 to 15.9	4	
16.0 to 19.9	6	
20.0 or above	8	and call the doctor

Give the dose with the meal. Record the glucose value, the units given and initials on the insulin chart. A dose that differs from the scale is a medication incident unless the doctor has written an override.

2. Governance, audit and training

This document is controlled. Printed copies are uncontrolled: the current version is held on the hospital document management system and a printed copy must be checked against it before use.

The document owner reviews the content at least every three years or earlier when national guidance, a serious incident or an audit finding requires it. Interim changes are approved by the relevant committee chair and recorded in the revision history.

Compliance is audited by the clinical audit department on a rolling sample of records. Results are reported to the quality and patient safety committee, which agrees actions with the ward managers and monitors their completion.

Staff who identify a deviation from this document, or a situation it does not cover, should discuss it with the senior clinician on duty and report it through the incident reporting system. Reporting is a learning tool and not a disciplinary process.

3. Revision history

Version	Date	Author	Summary of change
1.0	23/03/2021	Diabetes Inpatient Team	First issue
2.0	23/03/2023	Diabetes Inpatient Team	Triennial review; format harmonised
3.0	23/06/2025	Diabetes Inpatient Team	Tables updated after clinical audit
current	23/03/2026	Diabetes Inpatient Team	Review and re-issue

Annex A. Implementation notes

Staff who identify a deviation from this document, or a situation it does not cover, should discuss it with the senior clinician on duty and report it through the incident reporting system. Reporting is a learning tool and not a disciplinary process.

Compliance is audited by the clinical audit department on a rolling sample of records. Results are reported to the quality and patient safety committee, which agrees actions with the ward managers and monitors their completion.

Training on this document is part of the induction programme for clinical staff and is refreshed through the annual mandatory training cycle. Agency and locum staff receive a short briefing at the start of their first shift.

Equality and diversity: this document has been assessed for its effect on patients and staff with protected characteristics. Reasonable adjustments, interpreters and accessible formats are available through the patient experience team.

The document owner reviews the content at least every three years or earlier when national guidance, a serious incident or an audit finding requires it. Interim changes are approved by the relevant committee chair and recorded in the revision history.

This document is controlled. Printed copies are uncontrolled: the current version is held on the hospital document management system and a printed copy must be checked against it before use.

Data protection: any patient information handled under this document is processed in accordance with the data protection policy of the hospital. Access to records is limited to staff involved in the care of the patient.

Where this document refers to a role (for example the ward pharmacist or the senior nurse), the post-holder on duty carries out the task or delegates it to a suitably trained colleague who remains accountable to them.

Compliance is audited by the clinical audit department on a rolling sample of records. Results are reported to the quality and patient safety committee, which agrees actions with the ward managers and monitors their completion.

Training on this document is part of the induction programme for clinical staff and is refreshed through the annual mandatory training cycle. Agency and locum staff receive a short briefing at the start of their first shift.

Data protection: any patient information handled under this document is processed in accordance with the data protection policy of the hospital. Access to records is limited to staff involved in the care of the patient.

Staff who identify a deviation from this document, or a situation it does not cover, should discuss it with the senior clinician on duty and report it through the incident reporting system. Reporting is a learning tool and not a disciplinary process.
