Laboratory information

The medical biology laboratory of the Centre Hospitalier Saint-Aubin operates under its quality management system and takes part in external quality assessment programmes for every analyte reported above. Methods are photometric and immunoassay on the central analyser; haematology is performed by flow cytometry. Samples are kept for seven days after the report date and can be re-assayed on request.

Critical values are telephoned to the requesting ward and recorded in the laboratory information system. A result outside its reference interval is not necessarily clinically significant: interpretation belongs to the requesting clinician in the light of the patient's condition.

Queries: biochemistry secretariat, extension 4412, weekdays 08:00-17:00.
