Information security policy ISP-01

Scope

All employees, crew members using office systems and contractors.

Passwords and MFA

Multi-factor authentication is mandatory for e-mail, banking and the accounting system.

Phishing

Any e-mail requesting a change of bank details or an urgent payment must be reported to the Finance Director and verified by telephone.

Incidents

Report any incident to Kairos IT Services within one hour.

Acceptable use

Company devices are used for business purposes. Installation of software requires the approval of Kairos IT Services. Personal cloud storage must not be used for company documents.

E-mail security

External e-mails are tagged [EXTERNAL] in the subject line. Staff must check the sender's address and must never act on a request to change bank details or to pay urgently without verification by telephone on a known number.

Suspicious e-mails are forwarded to security@azurmarine.example and deleted.

Vessel systems

Vessel networks are segregated from navigation systems. ECDIS and radar are never connected to the crew Wi-Fi.

Training

Every employee follows an annual awareness session; finance staff follow an additional session on payment fraud.
